This note is about the MAREG tables.

The MAREG tables were developed in the course of the past year-and-a-half by a team led by Mrs. Bergele in the Ministry of Administrative Reform and E-Government (MAREG). These tables estimate the stock of ordinary employees in general government at the end of each month; and the intervening gross flows

Data gaps. There are some unidentified outflows and unidentified hirings, as well as some discrepancies between transfers within the general government. MAREG is researching the data, and some modifications may be made retroactively. The data are therefore preliminary, but their quality has already improved significantly over time.

Summary of results for 2011. The stock of general government ordinary employees is estimated to have dropped by some 24 thousand persons ( 3.5 percent), from 692 thousand persons at the end of 2010 to 668 thousand persons at the end of 2011 . The central government lost 4.6 percent of staff whereas other parts of general government combined lost only 1.6 percent of staff. The latter is in part due to an increase of over 4,500 staff, or 5 percent, in local governments-a remarkable result given that Kallikratis was designed to merge entities with intended cumulative savings of Euro 1.5 billion over three years, including in manpower needs. Other staff increases were recorded in the Ministry of Culture, and in hospitals. Double digit percentage reductions in staff were recorded in the administrative staff of the Ministry of Health \& Solidarity; SOEs of Chapter A; the Secretariat of Prefectures; the Ministry of Agriculture; the Ministry of Environment; and the Ministry of General Information.

1:5 rule. The 1:5 rule was not obeyed in 2011. By how much is a matter of interpretation. The 1:5 rule was valid from January-June. Then the rule was changed to 1:10. In 2010, the number of exits was 53,336 persons. If we apply half a year at $1: 5$ and half a year at $1: 10$, then the number of hirings that can take place in 2011 is $\mathbf{8 , 0 0 0}$ staff. In 2011, the number of hirings under the rule amounted to $\mathbf{1 6 , 7 1 1}$ staff.

| Greece: Hiring Rule in 2011 <br> (persons) |  |
| :--- | ---: |
| Exits in 2010 | 53,336 |
| Allowed hiring in 2011 |  |
| $1 / 2^{*}(1: 5$ rule $+1: 10$ rule) | 8,000 |
| Hiring in 2011 | 16,711 |
| Identified | 9,598 |
| Unidentied | 3,023 |
| Transfers in | 4,090 |
| Adjustments |  |
| From end-Dec 2010 | 3,098 |
| ATE/SSF transfers | 445 |
| Kallikrates transfers | 283 |
| Excess hiring | 4,885 |

Source: Table 1.

Adjustments. Of this amount, MAREG reports that 3,098 staff were hired at the end of 2010 (their appointment was published in the Official Gazette in the last few days of December 2010), but their numbers were not recorded in the tables until 2011 (they did not assume office until 2011). MAREG would therefore like to count these hirings in 2010 and not in 2011. Further, some 445 persons were transferred into the social security funds from ATE Bank. Even though ATE Bank is not part of the general government, MAREG reports that an exception was made for these transfers under the Law. Finally, MAREG reports that 283 staff transferred into local governments under Kallikrates were also exempt under the Law. Allowing for these adjustments results in net hiring of 12,885 staff—this is still $\mathbf{4 , 8 8 5}$ staff above the hiring limit. Lastly, MAREG reports that the number of excess hirings remained below 1000 staff. This occurred because the data reported for 2010 and early 2011 have to be revised, but the Troika team has not yet received these revised data so we are unable to verify this result.

Assessment: The hiring rule was not observed including because the change from 1:5 to $1: 10$ in mid-year and poor communication and cooperation among ministries and entities created difficulties implementing the policy. Also, incomplete institutional setup made data monitoring weak. Finally, the exemptions applied do not have a strong logic. Without these exemptions, the results are worse.

- The Troika staff understood that the authorities had committed to apply the 1:10 rule change retroactively to the beginning of 2011. But this was not communicated clearly from the Ministry of Finance to the Ministry of Administrative Reform and EGovernment.

Recommendation: Interministerial communication and cooperation on the staffing plan needs to improve. MAREG needs to make the staffing plan part of the budget cycle, ahead of the new year, and discuss it with all ministries and affected entities and approve and publish this detailed staffing plan (commitments) together with the budget.

- MAREG did not have an appropriate mechanism in place to measure employment. There was no monthly programming for the staffing plan. Ministries and entities were hiring personnel without notifying MAREG. Without a measuring system, without a monthly plan, and without consequences for misreporting hiring, it is not surprising that the objective was not met.

Recommendation: MAREG has made sound improvements in gathering data on employment by means of developing the electronic census system (a registry of every employee, which is now virtually complete). This is excellent and should be used to track employment in various dimensions (age, gender, by institution, type of contract, etc.). The monthly result of the census should be published on the web, with a brief explanatory note for documentation. MAREG needs to publish its monthly staffing plan on the web as well, and formally update this monthly table and documentary note as the policy changes. A table from the staffing plan and a column with realized numbers as the months roll along should be published on a monthly basis with a short explanatory note. Regarding the misreporting of employees, any staff that is not registered in the census and acknowledged as such by MAREG should not be paid. The weakest reporting of employment so far is in parliament-these individuals should not be paid.

## Conclusion:

- The hiring rule in 2011 was not met
- The hiring rule is too elastic with too many exceptions to allow close monitoring
- The census is well designed to be the cornerstone for employment monitoring and registration enforcement-it should be used for this purpose.

Annex—Documentation for Table 1.

- Ordinary employees are regular full time employees in the general government with a "permanent contract" or a "private contract of indefinite duration." For practical purposes, these are civil servants with tenure. They do not include staff hired on fixed term, hourly paid, political appointees, elected officials, project related, or otherwise appointed, which are classified as "other staff," not "ordinary staff."
- General government refers to the central government broken down by ministries, and legal entities, local governments, hospitals, social security funds, and state-owned enterprises of "Chapter A" that have been classified as part of the general government. General government does not include "Chapter B" companies, which are companies with minority or majority ownership of the public sector listed on the stock exchange.
- Gross outflows comprise retirements, unidentified outflows, and transfers out of the narrow public sector.
- Gross inflows comprise identified hirings, unidentified hirings, transfers into the general government from the broader public sector, and transfers in from the narrow public sector.
- Retirements are persons that leave government service because of old age retirement or voluntary early retirement.
- Unidentified outflows reflect the difference between the stock at the end of the present and the previous month that cannot be explained by identified net flows (a negative residual). These are exits that may not have been properly reported to MAREG.
- Transfers out of the narrow public sector are transfers of staff out of the ministries and other entities of the general government into other ministries and entities of the general government.
- Identified hiring reflects new recruitment either through ASEP or from the academies (military, police, and other security schools, and pedagogical schools; the graduating classes are hired in general government).
- Unidentified hiring reflects the difference between the stock at the end of the present and the previous month that cannot be explained by identified net flows (a positive residual). These are hirings that may not have been properly reported to MAREG.
- Transfers in from the broader public sector reflects all hiring in the general government of staff from other public sector entities not classified as general government-for instance a transfer into the ministries or local governments from an enterprise or entity of local government not classified as general government.
- Transfers in from the narrow public sector are transfers of staff into the ministries and other entities of the general government from other ministries and entities of the general government. The gross transfers in and transfers out of the narrow public sector represent staff reallocations within the general government and, in theory,
should be exactly the same number, but because of measurement difficulties, in 2011, these in and outflows did not match precisely.

1/ Outflows, inflows, and net flow reflect cumulative flows in January-December 2011
$2 / 1,369$ employees in the Hellenic Parliament as of $31 / 10 / 2011$
3/The transfers from broader public sector concern mainly transfers from municipal entreprises to local governments, following Kallikratis reform, which according to the law are not counted as 2011 new hirings.
4/ The hirings are initiated by ATE and then transferred to IKA. According to the provisions of Law 3899/2010, these are not counted in 2011 as new hirings.
5/ Retirements and hiring concern all Chapter A companies.
6/ Discrepancy.
